

TELESCOPIC MAST

PORTABLE MANUAL

It is an elevating system that can be manually extended to full open height in one minute or less.

Thanks to the quick lock/release mechanism, height adjustment can be made at each node. Thanks to its portable structure, it is ideal for situations that need to be deployed very quickly.

FEATURES

- Strong lock mechanism
- Different length variants according to need
- High corrosion resistance
- Support brackets for optional usage
- Short setup time
